

AERO-MARINE TECHNOLOGIES, INC.

When Service and Experience Matter

Aero-Marine Technologies, Inc. provides total support for waste and water system components found on Boeing, Airbus and Embraer aircraft. We are a full-service MRO with a worldwide customer base.

AMT's objective is to provide outstanding service with unsurpassed quality. Our FAA/EASA certified facility offers innovative repair solutions for today's operators.

We focus on and specialize specifically in the repair and overhaul of the following vacuum generators:

- 14330-350
- J540A4-100
- 14330-375
- 606802-2
- 645172-2

Our experience on these units has allowed us to develop life-extending maintenance procedures which result in longer on-wing time and cost savings to our customers. It's our attention to detail, we believe, that makes our product the best in the business. We back our work with a 24-month warranty.

In addition to full-service overhauls, our shop also repairs and restores individual components from all the above vacuum generators.

Established in 1991, Aero-Marine Technologies is recognized for our dedication to quality and customer service. Send your next overhaul to us and see what makes our shop different from our competitors. Even units deemed "beyond economical repair" often can be returned to service.
